SMART DIGITALIZATION FOR MARITIME LOGISTICS

A cloud-based workflow platform that digitalizes container handling, customs, and invoicing across ships, ports, and yards

Turning maritime workflow challenges into a unified digital platform

Maritime teams run complex operations across ships, ports, and yards, often using systems that evolved independently over time.

This creates natural gaps that require manual steps to keep container handling, customs, and invoicing moving.

Our framework digitalizes these workflows end to end and becomes a cloud-based platform shaped to each operator's needs. It unifies data, streamlines core processes, and uses AI to improve loading/offloading, customs, and invoicing. The result: real-time visibility, faster coordination, and lower OPEX.

Core capabilities

01 Cloud-native platform

Unified operational 02 & customs data

Rugged device access 03 with offline support

GPS, sensor & 04 satellite integration

Outcome-driven, 05 SLA-based support

Benefits

Up to 20% fuel savings through Al-driven container load optimization

Up to 25% lower logistics expenses with digitalized, automated workflows

Real-time visibility across ships, ports, yards, and customs

- Faster customs and documentation with
- Al-assisted processing

dation tailored to each operator's environment

A scalable digital foun-

How we deliver

Reduce manual workloads and process delays with Al- and automation-enabled

Cost-efficient automation:

workflows for container movement, customs, and invoicing **Outcome-based engagements:**

Service SLAs tied to uptime and workflow accuracy, ensuring reliabili-

ty and shared accountability

Agile rollout with training support to streamline adoption without disrupting operations

Change-ready deployment:

transportation & logistics capabilities
